ROGO 217 US (10309708)

IN THE CLAIMS

Claims 1 - 9. (Canceled)

- Claim 10. (currently amended) A method for attaching a ligand to a solid phase comprising consisting of:
 - (i) contacting an amine group on a surface of said solid phase with a molecule selected from the group consisting of 2-aminothiolane-HCl 2-iminothiolane-HCL and N-succinimidyl-S-acetyl thioacetate, to provide a sulfhydryl group in on said solid phase, wherein said molecule is contacted to said surface in a solution consisting of dimethylformamide (DMF), and
 - (ii) reacting a conjugate of <u>said</u> a ligand with a reactive group and a linker with the molecule attached to the surface of the solid phase in (i), wherein said linker contains a maleimide or sulfhydryl group or groups, to form a thiol linkage between said linker and said molecule; so as to attach said ligand to said solid phase.
- Claim 11. (previously presented) The method of claim 10, wherein said solid phase is a magnetic bead.
- Claim 12. (previously presented) The method of claim 10, wherein said ligand is an antibiotic.
- Claim 13. (previously presented) The method of claim 12, wherein said antibiotic is rapanyein or FK-506.
- Claim 14. (previously presented) The method of claim 10, wherein said linker is p-maleimidophenyl isocyanate.

Claims 15-17. (Canceled)

ROGO 217 US (10309708)

- Claim 18. (newly presented) A method for attaching a ligand to a solid phase, consisting of:
 - (i) contacting an amine group on a surface of said solid phase with a molecule selected from the group consisting of 2-iminothiolane-HCL and N-succinimidyl-S-acetyl thioacetate, to provide a sulfhydryl group on said solid phase;
 - (ii) contacting p-maleimido phenyl isocyanate to said sulfhydryl group to attach it thereto, and
 - (iii) reacting a conjugate of a ligand with a reactive group and a linker with the molecule attached to the surface of the solid phase in (ii), wherein said linker contains a maleimide or sulfhydryl group or groups, to form a thiol linkage between said linker and said molecule; so as to attach said ligand to said solid phase.
